6th NoAE Project Days

“From ideas and innovations to international cooperations and projects” is the guiding principle of the Network of Automotive Excellence (NoAE). Over the past 10 years NoAE has grown into an international platform with partners from all continents.

The international NoAE Project Days are one of the leading networking events for experts working in the mobility industry such as automotive, transportation, railway and aviation as well as innovators, company founder scientists or researchers.

The Project Days consist of four key elements:

Workshop & Marketplaces

.... On international mobility and transnational initiatives like Green Cities, Europe meets Taiwan, Content for Connected Cars, Netherland meets NRW and others.

Innovations for Mobility

... By hosting a renowned innovation award in four clusters: Powertrain & Electrification, Communication & Mobility, Material & Manufacturing and Design.

International Cooperation

.... We bring together partners from almost 30 countries and counsel them while they work together

“From Ideas to Projects”

.... To develop mobility solutions that are ready for the market is our guiding principle. Therefore we work together with major companies to find out about their demands.

NoAE Project Days – Where Partners meet

The Project Days are an interactive networking event where companies and institution can discuss partnership and business opportunities. Its concept is unique: they can use the NoAEplatform over the year, hand in ideas for innovations and look for partnering institutions. NoAE offers counseling and support during that partnering process. This means: when partners meet during the Project Days they have already been in close contact.

Agenda

April 17th

Welcome Participants and Get together

Special Arrangements e.g. plant visits in North Rhine-Westphalia

April 18th

Interactive Programme “From ideas and innovations to international cooperations and projects”:

Join the Network

NoAE, the Network of Automotive Excellence, is a free, open initiative for the automobile and supplier industry as well as the mobility sector. It is a professional network with the objective to intensify strategic organizational and technological exchanges of ideas and experiences among companies, research centers, universities and users.
