Cooperation

Results – 1

The 5th Project day led to a first important result: the «green» last mile delivery. Several cities with similar urban structures decided to integrate their approach to the traffic management inside their urban areas, with particular reference to the delivery of goods by means of e-bikes, e-cars and e-vans. Other clusters will be organized for the upcoming European call for projects.

Interaction with big companies and Institutions

Results – 2

All participant cities agreed to start a survey in Europe to collect common requirements (both technical and financial) to define a general profile for e-mobility and to start an interaction with companies and institutions. Results will be the starting point for common activities to launch during the next Project day.
